Functions

Structure of a function

```
function_name( ) # function name and brackets

function_name(arg) # arguments in brackets

function_name(arg1, arg2, arg3, arg4) # arguments are separated
                                      # by a comma
```

Example

```
rep(x = 4, times = 2)
```

Help on functions

```
?rep (?function_name)
```
